eDepoze ™

The Process You Know . . .

- Maintain confidentiality of documents until each is introduced as an exhibit.

- Mark individual exhibits on the fly with custom exhibit stamps.

- Share individual copies of each exhibit with all parties when it is introduced, just like passing copies around the room.

- All parties can review and annotate their own personal copies of exhibits.

- Maintain the integrity of official exhibits.

Only Better.

- No need to print documents and make multiple copies.

- Simplified deposition prep – just upload your potential exhibits or import from Relativity®.

- No need to lug around stacks or boxes of paper – just bring your laptop or iPad.

- No hassles with shipping documents out of town.

- No waiting to have exhibits scanned and distributed after the deposition.

- Eliminate the waste of multiple paper courtesy copies.

- Participants at remote locations receive documents instantly.

- Send exhibits via email, even during the deposition.

- Maintain official versions of exhibits and personal, annotated copies.

Making Life Easier, One Deposition at a Time.™

eDepoze is a cloud-based deposition software system that replicates the paper deposition exhibit process you know, but delivers all the benefits of using electronic documents as exhibits instead. Simply upload your electronic documents to our cloud-based repository, then log into our iPad app or web-based app to conduct or attend the deposition.
